JOB MARKET PAPER

“*Pricing Without Borders: Spillovers of External Reference Pricing in Pharmaceutical Regulation*”
with S. Gamba and P. Pertile

In response to rising drug spending, many countries use external reference pricing (ERP), which links domestic prices to foreign benchmarks. We show theoretically that strategic responses to the adoption of ERP by one country can create spillover effects with unintended consequences, including the possibility that the price reduction for the ERP adopter is less than expected. Exploiting the introduction of ERP in Germany in 2011 in a difference-in-differences design, we find that this policy caused a price increase in reference countries of 6.6% relative to non-reference markets. Results are robust across specifications, including an approach that accounts for confidential discounts.
